Ramlal Suthar

Early Engineer · Mobile SDKs & Full-Stack

India · ramsthr38@gmail.com · linkedin.com/in/ramlal-suthar · github.com/Ramsthr

Early engineer at Digia since 2023. I build mobile SDKs in Flutter, Android, iOS and React Native, and the Go/Node.js services, React dashboard and analytics behind them.

EXPERIENCE

Digia May 2023 — Present

Early Engineer · Full-time Aug 2023 — Present

Digia Engage · in-app engagement SDK · Feb 2026 — Present

- Built the in-app survey and product-guide campaign types in the Flutter, Android, iOS and React Native SDKs that render dashboard-designed campaigns natively in customer apps.
- Built campaign delivery analytics end to end: SDK events with drop reasons, a ClickHouse-backed analytics endpoint, and a dashboard panel showing triggered, shown and dropped campaigns by cause.
- Added SDK compatibility checks: the dashboard derives each campaign's minimum SDK version from a capability registry and warns before live changes; the backend filters campaigns by SDK version.
- Built the MoEngage and WebEngage integrations and contributed to CleverTap, including suppressing the platform's own in-app message so users don't see the same campaign twice.
- Started the React Native SDK (native bridge, Old and New Architecture). Wrote unit tests in each core SDK and Maestro end-to-end flows in the shared cross-platform test kit with golden snapshots.

Digia UI & Studio · server-driven UI platform · Aug 2023 — Feb 2026

- Contributed to the Digia UI SDK for Flutter, a product that renders native UI from JSON so teams ship UI changes without an app release; it cut feature delivery time by about 60–70%.
- Built the Android Jetpack Compose SDK from scratch, first version in 2 weeks (layout engine, modifiers, styling, actions, navigation, state); built a React Native prototype SDK in a week.
- Developed 50+ components for the shared, versioned component library; worked on real-time on-device preview and managed Preview Android app releases; contributed Go/Node.js services and Jenkins CI/CD.

Mobile App Developer Intern · Internship May 2023 — Jul 2023

- Built and launched 2 production Flutter apps for a local business on Google Play (Firebase Auth, Firestore, JSON-driven screens).

PROJECTS

AnswerRank — Tracks how often Claude and Gemini recommend a product for real buyer questions: collects each model's top 5 picks, normalises answers and reports position against competitors. Live demo.

TradeSense AI — Go backend that computes win rate, risk-reward, holding time and MFE/MAE per trade to flag costly habits; K-means groups traders by behaviour and an LLM writes the coaching.

UGen — AI portfolio platform: Go services for JWT auth, profiles and a RAG pipeline that parses PDF resumes into Qdrant to answer questions; MongoDB behind a rate-limited gateway.

SKILLS

Mobile SDKs	Flutter/Dart, Kotlin, Jetpack Compose, Swift/SwiftUI, React Native
Backend & data	Go, Node.js, TypeScript, ClickHouse, SQL, MongoDB
Web & infra	React, AWS, Firebase, Docker, Jenkins, Maestro

EDUCATION

B.Tech, Computer Science Engineering — Government Engineering College, Ajmer · CGPA 7.8/10 2019 — 2023
