Ramlal Suthar

Software Engineer | Mobile SDKs | Full-Stack Platforms

ramsthr38@gmail.com | +91 72328 41614 | LinkedIn | GitHub | Portfolio

Summary

Early engineer at Digia with 3+ years of experience building mobile SDKs and full-stack platforms from zero to production. Works across Flutter, Android, iOS, React Native, backend services, and developer tooling for server-driven UI and in-app engagement.

Experience

Digia **Aug 2023 – Present**
Early Engineer – Platform, SDK & Infrastructure *Full-time*

Digia Engage – *In-app engagement SDK* Feb 2026 – Present

- Built survey and product-guide campaign types across Flutter, Android, iOS, and React Native SDKs, rendering dashboard-designed experiences natively in customer apps.
- Delivered campaign analytics end-to-end: SDK events with drop reasons, a ClickHouse-backed API, and a dashboard showing triggered, shown, and dropped campaigns by cause.
- Implemented SDK compatibility checks using a declarative capability registry to determine minimum SDK versions, warn before live changes, and filter campaign delivery on the backend.
- Built MoEngage and WebEngage integrations and contributed to CleverTap, suppressing duplicate in-app messages; started the React Native bridge for both Old and New Architecture.
- Wrote unit tests across Android, iOS, and Flutter and Maestro end-to-end flows in a shared test kit that runs the same campaigns across platforms and compares golden snapshots.

Digia UI & Studio – *Server-driven UI platform* Aug 2023 – Feb 2026

- Contributed to the Flutter SDK that renders native UI from JSON, enabling interface updates without app releases; built 50+ components for the shared, versioned component library.
- Built the Android Jetpack Compose SDK from scratch, delivering its first version in two weeks with layout, modifiers, styling, actions, navigation, and state; built a React Native prototype in one week.
- Contributed to real-time device previews and managed Preview Android app releases; contributed Go and Node.js services for schema versioning and runtime configuration delivery, plus Jenkins CI/CD.

Mobile App Developer Intern *May 2023 – Jul 2023*

- Built and launched two Flutter apps for a local business on Google Play, integrating Firebase Auth, Firestore, and JSON-driven screens.

Selected Projects

AnswerRank – AI Search Visibility Diagnostic Live | Code

- Built a Claude/Gemini evaluation pipeline that normalizes top-five product recommendations, compares competitor visibility and cited criteria, and caches answers for 12 hours to reduce API costs.

TradeSense AI – Trading Behavior Analysis Code

- Built Go analytics for win rate, risk-reward, holding time, and MFE/MAE; used K-means clustering to group traders by behavior and an LLM to turn findings into plain-language coaching.

UGen – AI Portfolio Platform Code

- Built Go services for JWT auth, MongoDB profiles, and PDF resume ingestion with Qdrant embeddings and retrieval-augmented chat, behind a rate-limited gateway.

Technical Skills

Mobile: Flutter / Dart, Kotlin, Jetpack Compose, Swift / SwiftUI, React Native
Backend & Data: Go, Node.js, TypeScript, SQL, ClickHouse, MongoDB, Qdrant
Web, Cloud & Testing: React, AWS, Firebase, Docker, Jenkins, Maestro, unit testing, golden testing

Education

B.Tech – Computer Science Engineering **2019 – 2023**
Government Engineering College, Ajmer CGPA: 7.8 / 10
